

CATALOGUE NOTES:

- ❖ The data contained in this catalogue is ordered alphabetically by township/area and then by company. The company name listed is the name given on the drill log received and is not necessarily the company currently or most recently holding the ground.
- ❖ All units shown in table are metric.
- ❖ Due to space considerations, the "Assays" column may not display the full list of all commodities assayed for in a particular drillhole
- ❖ Drill logs, locations and any accompanying assay data are available through the Kenora District Geologist's Office.
- ❖ Column heading abbreviations:
 - Amt stored: Total footage of core in collection
 - Comp: Completion or core status notation (see below)
- ❖ Completion Status/Comp categories:
 - C Complete hole is stored
 - I Incomplete—some portion of hole is missing
 - A Assessment Core—the hole was collected for historical or assessment purposes and only a small fraction of the original core is stored
 - R Representative core—the hole is being kept intact as a representation of the area's geology
 - T Telescoped core—core has had redundant sections removed; only representative and anomalous sections have been retained
 - CT Eg.—core was originally collected complete and then telescoped

For further information, or to arrange access to the core, please contact:

Kenora District Geologist's Office
Ministry of Northern Development and Mines
Suite 104 – 810 Robertson Street
Kenora, ON, Canada
P9N 4J2
Phone: (807) 468-2813
Fax: (807) 468-2930

Craig Ravnaas, District Geologist
